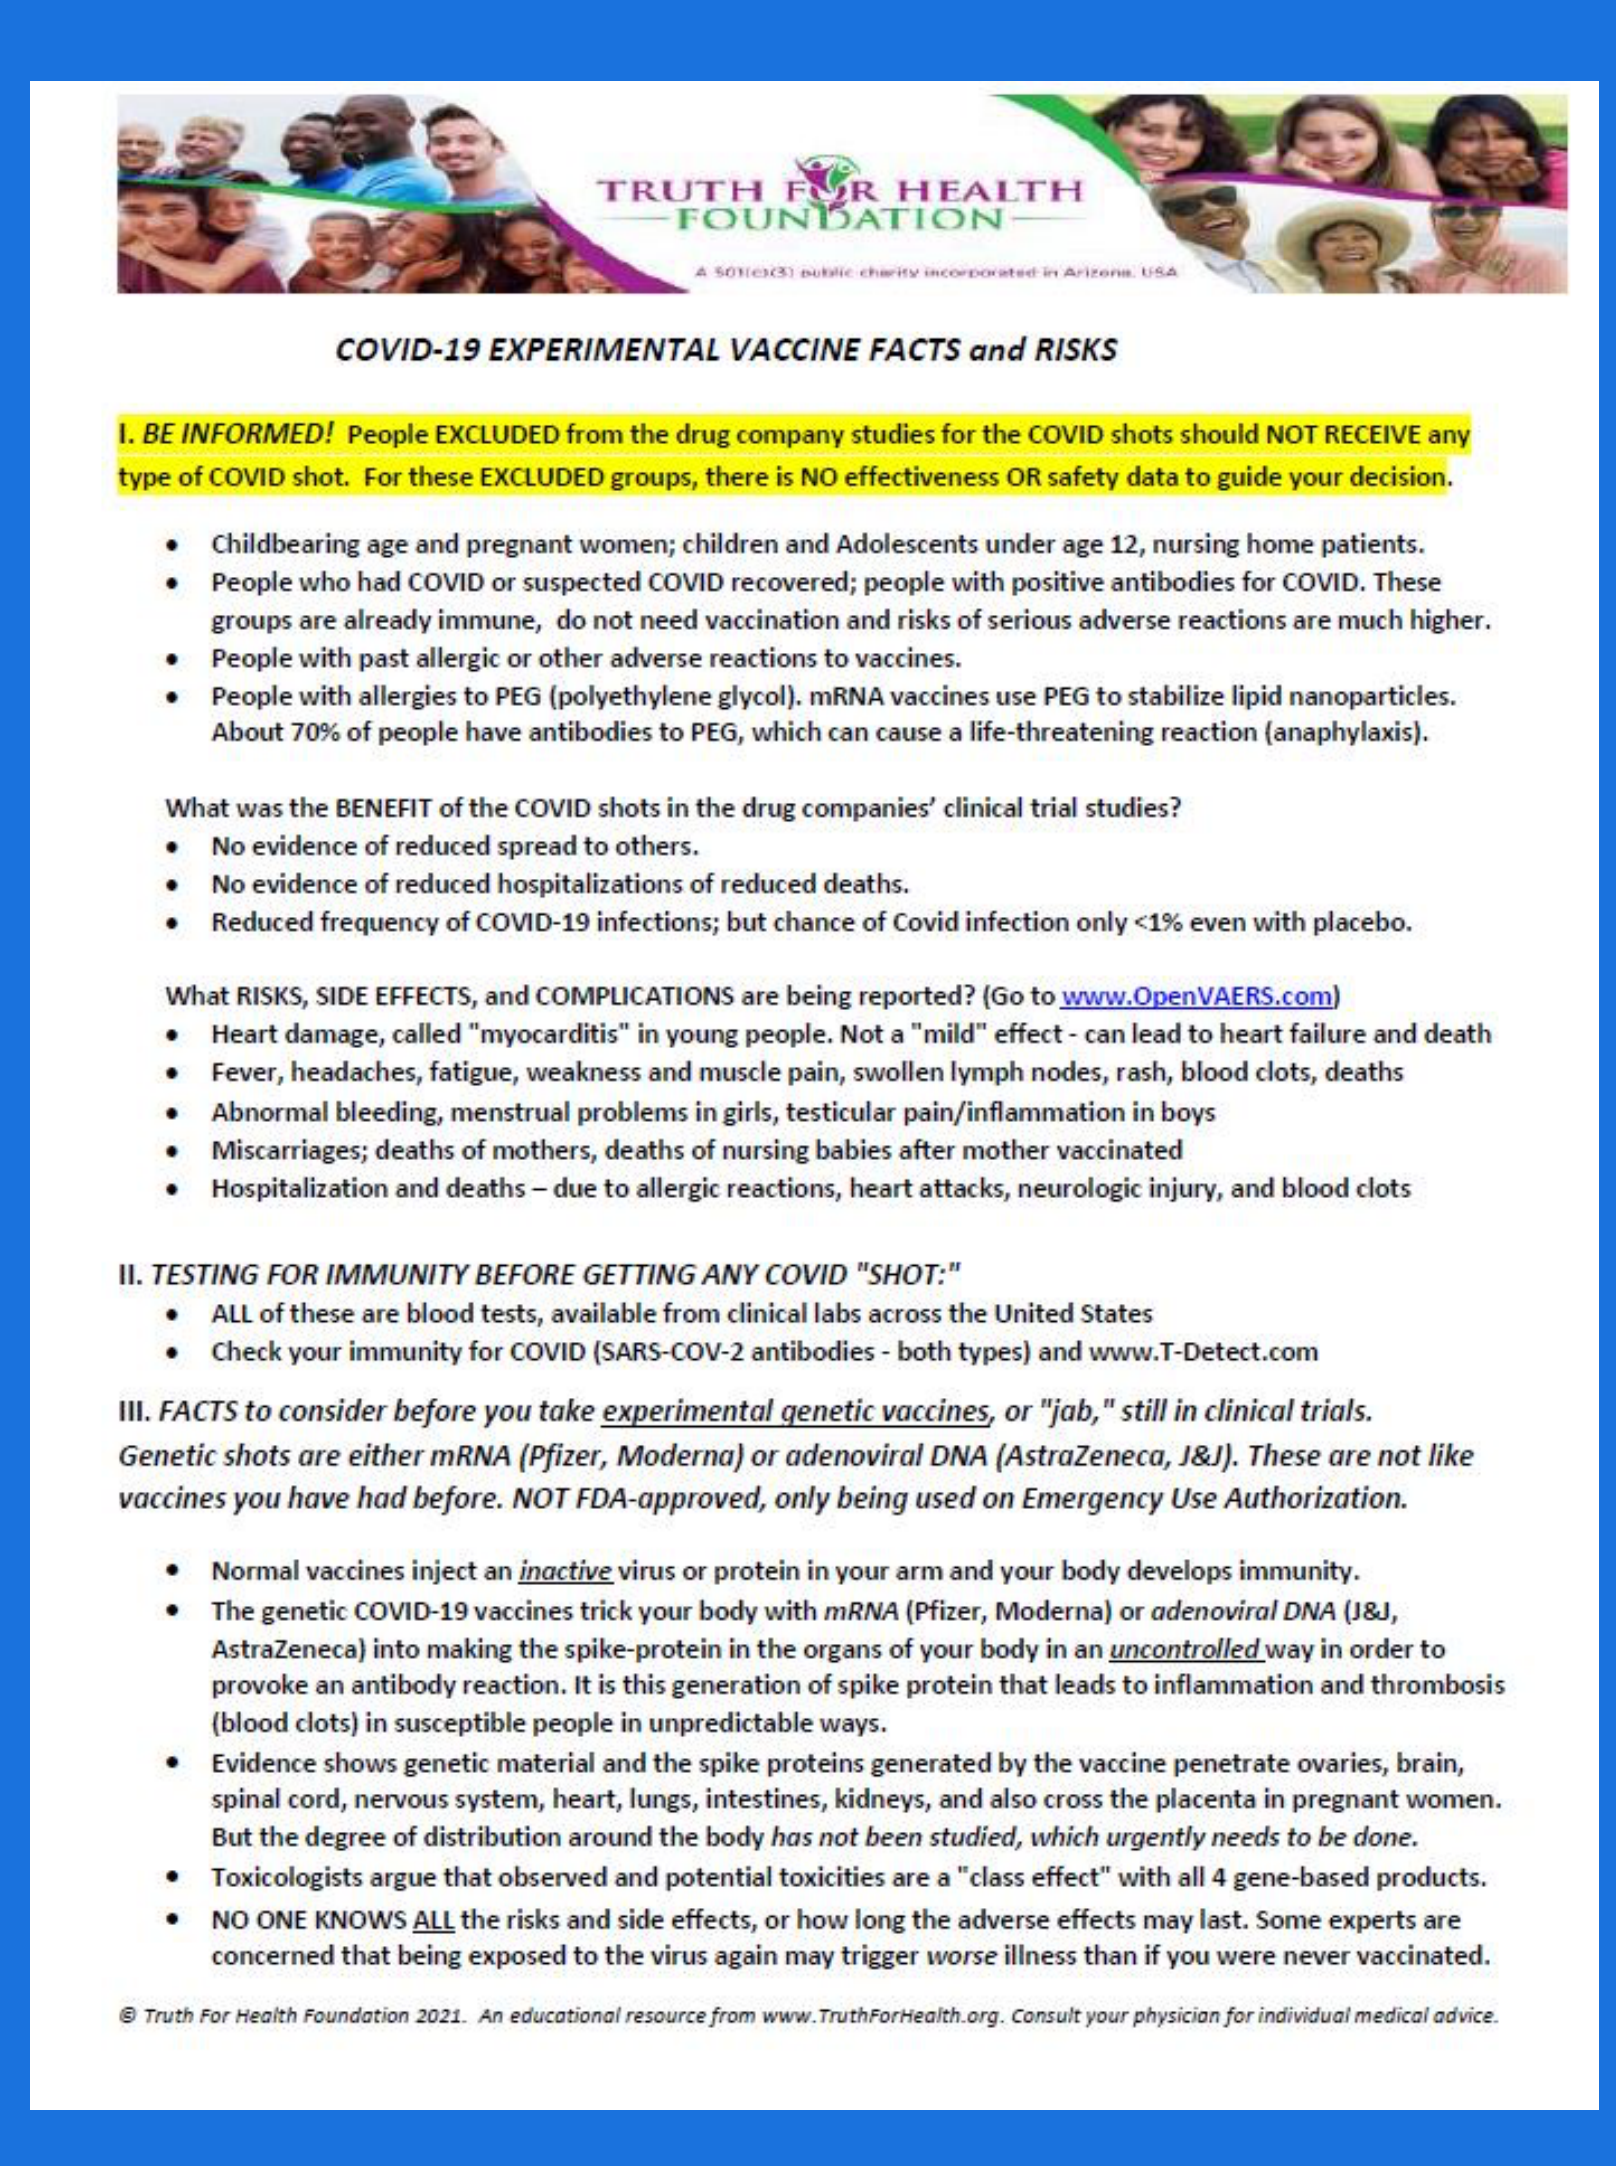
FACTS to think about before deciding to participate in research with genetic vaccines



TRUTH FOR HEALTH FOUNDATION

A 501(c)(3) public charity incorporated in Arizona, USA

COVID-19 EXPERIMENTAL VACCINE FACTS and RISKS

I. *BE INFORMED!* People EXCLUDED from the drug company studies for the COVID shots should NOT RECEIVE any type of COVID shot. For these EXCLUDED groups, there is NO effectiveness OR safety data to guide your decision.

- Childbearing age and pregnant women; children and Adolescents under age 12, nursing home patients.
- People who had COVID or suspected COVID recovered; people with positive antibodies for COVID. These groups are already immune, do not need vaccination and risks of serious adverse reactions are much higher.
- People with past allergic or other adverse reactions to vaccines.
- People with allergies to PEG (polyethylene glycol). mRNA vaccines use PEG to stabilize lipid nanoparticles. About 70% of people have antibodies to PEG, which can cause a life-threatening reaction (anaphylaxis).

What was the BENEFIT of the COVID shots in the drug companies' clinical trial studies?

- No evidence of reduced spread to others.
- No evidence of reduced hospitalizations of reduced deaths.
- Reduced frequency of COVID-19 infections; but chance of Covid infection only <1% even with placebo.

What RISKS, SIDE EFFECTS, and COMPLICATIONS are being reported? (Go to www.OpenVAERS.com)

- Heart damage, called "myocarditis" in young people. Not a "mild" effect - can lead to heart failure and death
- Fever, headaches, fatigue, weakness and muscle pain, swollen lymph nodes, rash, blood clots, deaths
- Abnormal bleeding, menstrual problems in girls, testicular pain/inflammation in boys
- Miscarriages; deaths of mothers, deaths of nursing babies after mother vaccinated
- Hospitalization and deaths – due to allergic reactions, heart attacks, neurologic injury, and blood clots

II. *TESTING FOR IMMUNITY BEFORE GETTING ANY COVID "SHOT:"*

- ALL of these are blood tests, available from clinical labs across the United States
- Check your immunity for COVID (SARS-COV-2 antibodies - both types) and www.T-Detect.com

III. *FACTS to consider before you take experimental genetic vaccines, or "jab," still in clinical trials. Genetic shots are either mRNA (Pfizer, Moderna) or adenoviral DNA (AstraZeneca, J&J). These are not like vaccines you have had before. NOT FDA-approved, only being used on Emergency Use Authorization.*

- Normal vaccines inject an *inactive* virus or protein in your arm and your body develops immunity.
- The genetic COVID-19 vaccines trick your body with *mRNA* (Pfizer, Moderna) or *adenoviral DNA* (J&J, AstraZeneca) into making the spike-protein in the organs of your body in an *uncontrolled* way in order to provoke an antibody reaction. It is this generation of spike protein that leads to inflammation and thrombosis (blood clots) in susceptible people in unpredictable ways.
- Evidence shows genetic material and the spike proteins generated by the vaccine penetrate ovaries, brain, spinal cord, nervous system, heart, lungs, intestines, kidneys, and also cross the placenta in pregnant women. But the degree of distribution around the body *has not been studied, which urgently needs to be done.*
- Toxicologists argue that observed and potential toxicities are a "class effect" with all 4 gene-based products.
- NO ONE KNOWS ALL the risks and side effects, or how long the adverse effects may last. Some experts are concerned that being exposed to the virus again may trigger *worse* illness than if you were never vaccinated.

The Nuremberg CODE – from NIH website

NIH National Institutes of Health
Office of NIH History & Stetten Museum

The Nuremberg Code The voluntary consent of the human subject is absolutely essential.This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of… Continue reading

Why Are We Vaccinating Children Against COVID-19?

"Highlights: Bulk of COVID-19 per capita deaths occur in elderly with high comorbidities. Per capita COVID-19 deaths are negligible in children. Clinical trials for these inoculations were very short-term. Clinical trials did not address long-term effects most relevant to children. High post-inoculation deaths reported in VAERS (very short-term)."

Pharma Budget Impact at FDA

Important article showing that drug compliance fees, paid by pharmaceutical companies, account for pay for roughly 1/2 of the FDA's budget. This helps the public understand why "Big Pharma" has so much power over FDA decisions that SHOULD be impartial and work serve the public safety concerns. The FDA is actually heavily influenced by and… Continue reading

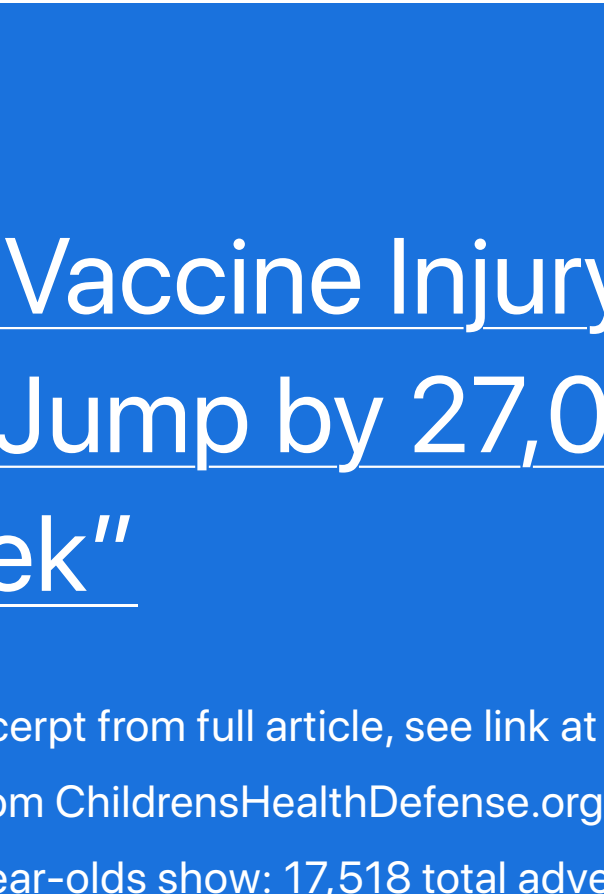
"FDA Pulls 'Bait and Switch' With Pfizer Vaccine Approval"



From Children's Health Defense:
"Buried in the fine print of Monday's approval of the Pfizer Comirnaty vaccine are two critical facts that affect whether the vaccine can be mandated, and whether Pfizer can be held liable for injuries, according to Children's Health Defense Chairman Robert F. Kennedy, Jr. and Dr. Meryl Nass."
